

Digidesign VENUE Systems

Complete live sound mixing system packages

Digidesign® VENUE is a state-of-the-art live sound production environment comprised of high-quality components that work together as one system to deliver studio-grade sound and processing, powerful performance, unprecedented reliability, and complete ease of use, with maximum flexibility. While all VENUE system components (except Mix Rack) can be purchased individually to expand an existing system or provide alternative configuration options, the simplest and most cost-effective way to bring VENUE live sound mixing to your venue is with a complete VENUE system package.

D-Show Main and Sidecar System

Digidesign offers three complete VENUE system packages: the D-Show® Main and Sidecar System, D-Show Profile™ System, and D-Show Profile Mix Rack System. You can further customize any of the components within these systems for your needs, including reconfiguring the I/O, integrating Pro Tools® recording (see other side) and personal monitoring, and boosting power through additional DSP Mix Engine Cards.

For more information, pricing details, and help with configuring a system, visit your local VENUE dealer.

D-Show Main and Sidecar System

Offers the greatest I/O and control surface expandability

- D-Show Main Unit (8 input and output faders)
- D-Show Sidecar (16 faders; expandable to 56 faders with two additional Sidecars)
- Stage Rack with 48 mic/line inputs and 8 outputs (expandable to 48 outputs)
- FOH Rack with three DSP Mix Engine Cards (expandable to five, plus other options)
- ECx Ethernet Option Card
- D-Show® software
- VENUEPack and VENUEPack Pro bundles
- Integrated trackball and monitor mount (monitor sold separately)
- All necessary cables and accessories

D-Show Profile System

Offers great I/O expandability and a compact control surface

- D-Show Profile control surface (24 input faders, 8 output faders)
- Stage Rack with 48 mic/line inputs and 8 outputs (expandable to 48 outputs)
- FOH Rack with three DSP Mix Engine Cards (expandable to five, plus other options)
- ECx Ethernet Option Card
- D-Show software
- VENUEPack and VENUEPack Pro bundles
- Mounting brackets for trackball and monitor (trackball and monitor sold separately)
- All necessary cables and accessories

D-Show Profile Mix Rack System

For smaller productions—offers the most affordable entry into VENUE

- D-Show Profile control surface (24 input faders, 8 output faders)
- Mix Rack with 48 mic/line inputs, 16 outputs, two DSP Mix Engine Cards, and integrated ECx Ethernet Option (expandable to 32 outputs and three DSP Mix Engine Cards, plus other option cards and interfaces)
- D-Show software
- VENUEPack plug-in bundle
- Mounting brackets for trackball and monitor (trackball and monitor sold separately)
- All necessary cables and accessories

VENUE and Pro Tools|HD Bundles

Complete live sound mixing and recording bundles

If you're looking to integrate multitrack recording, live track playback, and virtual soundcheck into the live sound mixing workflow, Digidesign® VENUE HD system bundles unite the state-of-the-art VENUE live sound production environment with industry-standard Pro Tools|HD® recording at thousands of dollars in savings.

Choose from five VENUE and Pro Tools|HD system bundle configurations that each provide a complete VENUE system (featuring a D-Show® or D-Show Profile™ control surface) for mixing, coupled with a powerful Pro Tools|HD recording system† for studio-quality live recording and Virtual Soundcheck. As with any VENUE system, you can further customize the I/O, DSP processing, and other options for your interface and workflow needs.

For more information, pricing details, and help with configuring a system, visit your local VENUE dealer.
