# Pro Tools LE 7.1cs10 Update for Windows XP

### For Digi 002, Digi 002 Rack, Mbox, or Mbox 2 Systems with Pro Tools LE 7.1 for Windows XP

 This update will not work without Pro Tools LE 7.1 for Windows XP already installed.

 This update is NOT for Mbox 2 Pro systems.

---

## What's Fixed in Pro Tools LE 7.1cs10?

Pro Tools LE 7.1cs10 for Windows XP contains the following:

### **Fixed: Importing Files By Drag and Drop Could Prevent The Session From Being Saved (Item #80417)**

MP3, MP4, WAV and AIFF were affected.

A subsequent Save, Save As, Save A Copy or Auto-Backup would result in an assertion error.

 This problem was inadvertently introduced in Pro Tools LE 7.1cs9.

### **Fixed: Standard Type 1 MIDI files, exported from Pro Tools 7.x, could not be read by some applications (item #71254)**

### **Fixed: Relink Problems When Using Mtools, Soundminer, or NetMix to import files (Item #81138)**

Using “Automatically Copy on Import” created a duplicate file only when using Soundminer. Only the Pro Tools-created file (with an appended “2”) was assigned a Unique ID.

No Unique ID was being added to files imported by Mtools or Netmix.

The relink problems would occur when reopening the session.

## Fixes Included from Pro Tools LE 7.1cs9

### **Fixed: Pro Tools Always Overwrites Automation in Existing Playlists When Using “Import (Session Data)—Overlay New on Existing Playlists” (Item #63172)**

Pro Tools would not allow a session with a 2-hour start time to overlay automation data on a session with a 1-hour start time without clearing all automation before 2 hours on the destination session.

Automation cannot be “combined” with an overlay—the destination session’s automation will be replaced from the Session Start time of the source session.

Inserts and sends must be consistent between sessions or they may be overwritten.

### **Fixed: Some Automation Moves Could Be Written Incorrectly When Writing Immediately After A “Play” Command (Item #78032)**

This could occur when touching a control immediately after a “play” command, but before the transport started moving.

### **Fixed: Potential Problems When Relinking Audio Files (Item #77061, #79230)**

If DigiTranslator was not installed, Pro Tools would assign a new unique ID to a copy of an Avid audio file when using “Save A Copy.” This was because Pro Tools required DigiTranslator to read Avid unique IDs.

Files without unique IDs imported into Pro Tools could not be later relinked if the file name had later been changed by the user from the Explorer level.

Pro Tools will now function in the following way:

- Automatically add a unique ID (as needed) to audio files when opening a session or importing audio.
- Recognize Avid unique IDs, even when DigiTranslator is not installed.

### **Fixes Included from Pro Tools LE 7.1cs8**

#### **Fixed: Some International Characters Were Not Allowed In Pro Tools 7 Sessions (Item #71269, 76222)**

German, Norwegian, Swedish, and French/French Canadian characters were affected.

DigiBase search criteria was also affected.

### **Fixes Included from Pro Tools LE 7.1cs7**

#### **Fixed: Using “Import Session Data” and Choosing “Consolidate From Source Media” Would Post an Error (Item #72604)**

The error posted was “Could not complete your request because Assertion in Cmn\_Interval.cpp, line 210.”

### **Fixes Included from Pro Tools LE 7.1cs6**

#### **Fixed: Could Not Always Copy Time Code Values from Region Start/End/Length Fields (Item #72677)**

Copying from these fields was not possible if there was a time selection on a playlist or the timeline. This could also potentially affect some third party post applications that required the use of these fields.

*Pro Tools LE 7.1cs6 was the first CS release for Pro Tools LE 7.1 (there were no cs1 through cs5 releases for Pro Tools LE version 7.1).*

---

## **Who Should Use Pro Tools LE 7.1cs10?**

This update is recommended for Pro Tools LE 7.1 for Windows XP users requiring fixes in the following areas:

- Importing via drag and drop
- Exporting MIDI
- Better unique ID management
- Using “Overlay” with “Import Session Data”
- Writing automation
- Using international characters
- Using “Import Session Data” with consolidation
- Copying/pasting time code numbers

*Important: Pro Tools LE 7.1cs10 is provided as an interim “customer support (CS)” release to address the issues described. While our testing has not shown these changes to introduce other problems, this version has not been fully qualified by Digidesign.*

---

## Updating Pro Tools

### To update to Pro Tools LE 7.1cs10:

- 1 Verify Pro Tools LE 7.1 is installed on your Digi 002, Digi 002 Rack, Mbox, or Mbox 2 system.
- 2 Quit the Pro Tools application if it is open.
- 3 Locate the Pro Tools LE 7.1cs10 installer and launch it.
- 4 Follow the on-screen instructions to install Pro Tools LE 7.1cs10.
- 5 When installation is complete, restart your computer.

If you have installed previous updates, some file versions may not change. This update installs the following files:

- ProToolsLE.exe (v7.1cs10)
- FFmt.dll (7.1cs9)
- DFW.dll (7.1cs8)
