

# Arturia Analog Factory

This Read Me documents known issues and workarounds with Arturia Analog Factory plug-ins.

---

## Known Issues

### **First Instance of Analog Factory Occasionally Results in a -9128 Error (Issue #104913)**

Analog Factory will occasionally display a -9128 error message the first time in a session that it is inserted on a track. If this occurs, you should close the error dialog. Pro Tools and the plug-in will function properly.

### **Analog Factory SE Plug-in Binary Displays the Incorrect Version Number (Mac Only) (Issue #101716)**

The Arturia Analog Factory SE interface for Mac OS X and the plug-in “Get Info” will show version “2.0” when it is actually version 2.1.1. If you click on the “Analog Factory 2.0” logo in the open application, the pop-up screen correctly displays version 2.1.1.
