

Bomb Factory Plug-Ins

This document contains important information and known issues with Bomb Factory plug-ins (including Free Bomb Factory Plug-Ins), with workarounds when available.

Bomb Factory Plug-Ins 4.2

Bomb Factory iLok Authorizations

The Digidesign Bomb Factory 4.0 and higher plug-ins have new iLok authorizations that are different from legacy Bomb Factory products. Authorizations for Bomb Factory versions 3.0 and earlier will not work with the new Digidesign Bomb Factory 4.0 and higher plug-in installers. Customers who own legacy versions of Bomb Factory plug-in authorizations and wish to obtain new iLok authorizations for the Digidesign Bomb Factory 4.0 and higher plug-ins should visit the support pages of the Digidesign Web site for information on Bomb Factory updates and upgrades (www.digidesign.com).

Support for Pro Tools Delay Compensation

Bomb Factory plug-ins version 4.1.1 and higher support Pro Tools Delay Compensation (Pro Tools 6.4 and higher). Customers using Bomb Factory version 4.0 plug-ins with Pro Tools 6.4 and higher software should update all Bomb Factory plug-ins to 4.1.1 and higher.

Support for D-Control and Command|8 Mixing Surfaces

Bomb Factory plug-ins are now fully compatible with Digidesign's new D-Control and Command|8 control surfaces. Customers using Bomb Factory version 4.0 plug-ins and D-Control or Command|8 control surfaces should update all Bomb Factory plug-ins to 4.1.1 and higher.

Known Issues

Restoring Original Bomb Factory Plug-In Settings on Mac OS X Systems (Item #54459)

Almost all plug-in settings folder names for Bomb Factory plug-ins on Mac OS X were changed with the release of Digidesign Bomb Factory Plug-Ins version 4.0. When opening a session created with original Bomb Factory settings there will be two Plug-In Settings folders. In order to be able to use old settings in the session, the settings can be imported from the "TM" settings folder, or they can be copied manually in Finder into the current Plug-In Settings folder.

Bomb Factory Plug-ins Cannot Be Moved (Item #46651)

On systems with HD Core or HD Process cards, you may experience difficulties at higher sampling rates when trying to force a Bomb Factory plug-in off an Accel DSP onto an HD Core or HD Process card, in a situation where there should be ample DSP available on the card.

Fixes in Bomb Factory Plug-Ins 4.2

Fixed: Avid Compatibility

Bomb Factory AudioSuite plug-ins are now compatible with Avid software that supports the AudioSuite plug-in format. Supported Avid systems include Avid Xpress DV, Avid Xpress Pro software, and all Avid DNA systems.

Fixes in Bomb Factory Plug-Ins 4.1.2 (Windows XP Only)

Fixed: Bomb Factory 4.1.1 Control Surface Support

(Windows XP Only)

All retail and bundled Windows Bomb Factory plug-ins version 4.1.1 did not contain support for Digidesign ICON and Command|8 control surfaces. Windows Free Bomb Factory plug-ins and Macintosh Bomb Factory plug-ins were unaffected.

Fixes Included with Bomb Factory 4.1.1

Fixed: Bomb Factory 4.1 Plug-Ins Expiration Removed

All Macintosh and Windows Bomb Factory plug-ins version 4.1 were inadvertently set to expire on July 17th, 2004. Bomb Factory 4.1.1 plug-ins have no expiration date.

Fixes Included with Bomb Factory 4.1

Fixed: Error -7059 with the BF76 Plug-In on Windows XP (Free Bomb Factory Plug-Ins Only)

(Windows XP TDM Systems Only)

DAE error -7059 occurs when attempting to instantiate the 4.0.1 version of the Free Bomb Factory BF76 plug-in with Windows XP TDM Systems. RTAS and AudioSuite versions of Free Bomb Factory BF76 are not affected.

Fixes included with Bomb Factory 4.0

Fixed: Error -7204 with the Free Bomb Factory Plug-ins

(Windows XP and Mac OS X)

The following 4.0 HTDM versions of Free Bomb Factory plug-ins could encounter a -7204 error when used with Pro Tools TDM systems:

- BF Essential Correlation Meter
- BF Essential Meter Bridge
- BF Essential Noise Meter
- BF Essential Tuner
- Funk Logic Mastererizer

Fixed: Error -6003 with the Free Bomb Factory Plug-ins

(Mac OS X Only)

On Macintosh systems, the following Bomb Factory version 4.0 plug-ins require the Digidesign StreamManager to be installed. Otherwise, a -6003 error will appear.

- BF Essential Correlation Meter
- BF Essential Meter Bridge
- BF Essential Noise Meter
- BF Essential Tuner
- BF Cosmonaut Voice
- Funk Logic Mastererizer
