

# Video Satellite LE

This Read Me documents important information and known issues for using Video Satellite LE with Pro Tools 8.0. When available, workarounds are provided.

---

## Compatibility

For the latest compatibility information, visit the Digidesign website (<http://www.digidesign.com/compatibility>).

---

## Installation and Operation

For software installation and operating instructions, refer to the electronic PDF *Video Satellite LE Guide* that came with your software. For additional information about Pro Tools, refer to the *Pro Tools Reference Guide*.

### Copy Protection

Many Digidesign plug-ins and software options are authorized using the iLok USB Smart Key (iLok), manufactured by PACE Anti-Piracy, Inc.

*iLok USB Smart Key*

The iLok is similar to a dongle, but unlike a dongle, it is designed to securely authorize multiple software applications from a variety of software developers. This key can hold over 100 licenses for all of your iLok-enabled software. Once an iLok is authorized for a given piece of software, you can use the iLok to authorize that software on any computer.

See the *iLok Usage Guide* for details, or visit the iLok website ([www.iLok.com](http://www.iLok.com)).

## Known Issues

This section documents known issues you may encounter in using Video Satellite LE, along with workarounds if they exist.

Pro Tools must be quit for using another application which supports Blackmagic Design hardware

### **System Instability when Running Multiple Applications Using Blackmagic Design Hardware for QuickTime Video Output (Item #104497)**

When Pro Tools is running with a Blackmagic DeckLink II Extreme or Intensity video capture and playback PCI-e card installed, launching Blackmagic Design's Deck Capture utility, Final Cut Studio, or any other application which supports Black Magic hardware for video output, can result in system instability. To avoid any potential system instability only use one Blackmagic DeckLink-aware application at a time.
