

# iZotope Lite

This Read Me documents known issues and workarounds with iZotope Lite plug-ins.

---

## Known Issues

### **Using Spectron Lite with Pro Tools Default Hardware Buffer Size Settings Results in CPU Errors (Item #101581)**

Spectron Lite will not operate efficiently at default Hardware Buffer Size (H/W Buffer Size) settings. This results in CPU errors (such as -9128). The workaround is to open the Playback Engine dialog and reset the H/W Buffer Size to 1024 or higher. This should eliminate these types of CPU usage errors.
