

Pro Tools LE 7.1.1cs1 Update for Mac OS X 10.4

For Digi 002, Digi 002 Rack, Mbox, or Mbox 2 Systems with Pro Tools LE 7.1.1 for Intel-based Macs Only

⚠ *This update will not work without Pro Tools LE 7.1.1 for Digi 002, Digi 002 Rack, Mbox, or Mbox 2 systems on Intel-based Macs already installed.*

What's Fixed in Pro Tools LE 7.1.1cs1?

Pro Tools LE 7.1.1cs1 for Intel-based Macs contains the following:

Fixed: Pro Tools Always Overwrites Automation in Existing Playlists When Using “Import (Session Data)—Overlay New on Existing Playlists” (Item #63172)

Pro Tools would not allow a session with a 2-hour start time to overlay automation data on a session with a 1-hour start time without clearing all automation before 2 hours on the destination session.

⚠ *Automation cannot be “combined” with an overlay—the destination session’s automation will be replaced from the Session Start time of the source session.*

⚠ *Inserts and sends must be consistent between sessions or they may be overwritten.*

Fixed: Volumes With Japanese Naming Will Not Mount In DigiBase (Item #73463)

Volumes with Japanese naming will not mount in DigiBase and will not allow you to create a Pro Tools session without an error.

Fixed: Opening or Importing an OMF With AIFF Media Would Result In An Error (Item #77908)

DigiTranslator users only.

Fixed: When Using CoreAudio Input To Record With Third Party Applications, Digital Noise Would Result (Item #78481)

Note that this problem only occurs with Intel-based Macs.

Fixed: Some Automation Moves Could Be Written Incorrectly When Writing Immediately After A “Play” Command (Item #78032)

This could occur when touching a control immediately after a “play” command, but before the transport started moving.

Who Should Use Pro Tools LE 7.1.1cs1?

This update is recommended for all Pro Tools LE 7.1.1 for Intel-based Mac users and contains fixes in the following areas:

- Using “Overlay” with “Import Session Data”
- Using volumes with Japanese naming
- Importing OMF Files with AIFF Media
- Using CoreAudio to record with third party applications
- Writing Automation

⚠ Important: *Pro Tools LE 7.1.1cs1 is provided as an interim “customer support (CS)” release to address the issues described. While our testing has not shown these changes to introduce other problems, this version has not been fully qualified by Digidesign.*

Updating Pro Tools LE 7.1.1

To update to Pro Tools LE 7.1.1cs1:

- 1 Verify Pro Tools LE 7.1.1 for Intel-based Macs is installed on your system.
- 2 Quit the Pro Tools application if it is open.
- 3 Locate the Pro Tools LE 7.1.1cs1 installer and launch it.
- 4 Follow the on-screen instructions to install Pro Tools LE 7.1.1cs1.
- 5 When installation is complete, restart your computer.

This update installs the following files:

- Pro Tools LE.app (v7.1.1cs1)
- Digi CoreAudio Manager.app (v7.1.1cs1)
- Digidesign CoreAudio.plugin (v7.1.1cs1)
