

Pro Tools LE 7.1.1cs2 Update for Intel-based Macs

For Digi 002, Digi 002 Rack, Mbox, or Mbox 2 Systems with Pro Tools LE 7.1.1 for Intel-based Macs Only

⚠ *This update will not work without Pro Tools LE 7.1.1 for Digi 002, Digi 002 Rack, Mbox, or Mbox 2 systems on Intel-based Macs already installed.*

What's Fixed in Pro Tools LE 7.1.1cs2?

Pro Tools LE 7.1.1cs2 for Intel-based Macs contains the following:

Fixed: Relink Problems With Avid Audio, and When Using Mtools, Soundminer, or NetMix to Import Files (Item #77061, 79230, 81138)

- Files without unique IDs imported into Pro Tools could not be later relinked if the file name had later been changed by the user from the Finder level.
- Using “Automatically Copy on Import” created a duplicate file only when using Soundminer. Only the Pro Tools-created file (with an appended “2”) was assigned a Unique ID.
- Relink problems would occur when reopening the session

Pro Tools will now:

- Automatically add a unique ID to audio files when opening a session or importing audio.
- Recognize Avid unique IDs, even when DigiTranslator is not present.

Fixed: When Using Network Home Directories, Pro Tools Would Not Launch if the Library/Preferences Directories Were Not On A Local File System (Item #78524)

Fixed: Standard Type 1 MIDI Files, Exported from Pro Tools 7.x, Could Not be Read by Some Applications (Item #71254)

Fixes Included from Pro Tools LE 7.1.1cs1

Fixed: Pro Tools Always Overwrites Automation in Existing Playlists When Using “Import (Session Data) - Overlay New on Existing Playlists” (Item #63172)

- Pro Tools would not allow a session with a 2-hour start time to overlay automation data on a session with a 1-hour start time without clearing all automation before 2 hours on the destination session.
- Automation cannot be “combined” with an overlay - the destination session's automation will be replaced from the Session Start time of the source session.
- Inserts and sends must be consistent between sessions or they may be overwritten.

Fixed: Volumes with Japanese Naming Will Not Mount in DigiBase (Item #73463)

Volumes with Japanese naming will not mount in DigiBase and will not allow you to create a Pro Tools session without an error.

Fixed: Opening or Importing an OMF via DigiTranslator with AIFF Media Would Result in an Error (Item #77908)

This would result in an assertion error.

Fixed: When Using CoreAudio Input To Record With Third Party Applications, Digital Noise Would Result (Item #78481)

Note that this problem only occurs with Intel-based Macs.

Fixed: Some Automation Moves Could Be Written Incorrectly when Writing Immediately After a “Play” Command (Item #78032)

This could occur when touching a control immediately after a Play command, but before the Transport started moving.

Who Should Use Pro Tools LE 7.1.1cs2?

This update is recommended for all Pro Tools LE 7.1.1 for Intel-based Mac users and contains fixes in the following areas:

- ◆ Better unique ID management
- ◆ Importing files using 3rd party applications
- ◆ Exporting MIDI
- ◆ Using “Overlay” with “Import Session Data”
- ◆ Using volumes with Japanese naming
- ◆ Importing OMF Files with AIFF Media
- ◆ Using CoreAudio to record with third party applications
- ◆ Writing Automation

⚠ Important: *Pro Tools LE 7.1.1cs2 is provided as an interim “customer support (CS)” release to address the issues described. While our testing has not shown these changes to introduce other problems, this version has not been fully qualified by Digidesign.*

Updating Pro Tools LE 7.1.1

To update to Pro Tools LE 7.1.1cs2:

- 1 Verify Pro Tools LE 7.1.1 for Intel-based Macs is installed on your system.
- 2 Quit the Pro Tools application if it is open.
- 3 Locate the Pro Tools LE 7.1.1cs2 installer and launch it.
- 4 Follow the onscreen instructions to install Pro Tools LE 7.1.1cs2.
- 5 When installation is complete, restart your computer.

This update installs the following files:

- Pro Tools LE.app (v7.1.1cs2)
- DAE.framework (v7.1.1cs2)
- FFmt.framework (v7.1.1cs2)
- Digi CoreAudio Manager.app (v7.1.1cs1)
- Digidesign CoreAudio.plugin (v7.1.1cs1)
